WHAT CLASS OF ANIMAL CAN I FEED PROFELAC GREEN TO?

ProfeLAC Green is an excellent all-purpose calf milk replacer. Suitable for both dairy and beef calves, ProfeLAC Green offers excellent nutrition at a more affordable price.

FREQUENTLY ASKED QUESTIONS (FAQS)

HAS THE FORMULATION CHANGED, ALONG WITH THE NAME, FROM PROFELAC SILVER TO GREEN?

Essentially no. The fat and protein levels of ProfeLAC Green remain the same as they were in ProfeLAC Silver. However, the vitamin, mineral, and probiotic profiles have been enhanced to align with current research and best practices.

CAN PROFELAC GREEN BE USED FOR OTHER SPECIES?

Yes. ProfeLAC Green can be used for various domestic animals, including foals, kittens, puppies, and piglets, especially when purpose-designed products are either too expensive or unavailable.

WHY ISN'T A SET MIX RATE LISTED ON THE BAG?

Like our own children, calves need more food as they grow, and we should, therefore, provide more milk to support their growth and health as they get bigger. Due to the significant differences between various calf operations and facilities, there are many options for increasing intake, such as adjusting mix rate, feed volume, and the number of feeds per day to suit the system and the calf's current size.

CAN PROFELAC GREEN BE USED IN ANTIMICROBIAL-FREE (NEVER-EVER) PROGRAMS?

Yes. ProfeLAC Green contains no ionophore or antimicrobial and is approved for use in most antimicrobial-free programs. Always check with your target market to be sure.
