

# ProfeLAC<sup>®</sup> SHEPHERD

PREMIUM LAMB & KID MILK REPLACER

Specifically formulated for Lambs and Kids, but also suitable for a range of infant domestic and farmyard animals

- ✓ High in fat and protein to replace ovine/caprine milk
- ✓ Includes natural betaine to aid in hydration
- ✓ Ionophore-free and can be used in Antimicrobial-free feeding programs
- ✓ Contains Celmanax and Probiotics for optimal gut health

ProfeLAC SHEPHERD premium Milk Replacer has been blended from high quality ingredients to offer an easy to mix formula.

With lower lactose levels than Milk Replacers, ProfeLAC SHEPHERD is of benefit to small infant ruminants and other species that respond better to high-fat, low-lactose milk feeds.

**28%** FAT | **25%** PROTEIN

The Complete Range of  
**Nutritional Milk Powder Solutions**  
For Young Animals

Easy to mix formula

Suitable for multiple species

Contains Celmanax and Probiotics for optimal gut health

**FAT 28% PROTEIN 25%**

### WHAT CLASS OF ANIMAL CAN I FEED PROFELAC SHEPHERD TO?

ProfeLAC Shepherd is formulated explicitly for lambs and kids but is also suitable for various infant domestic and farmyard animals.

## FREQUENTLY ASKED QUESTIONS (FAQS)

### THE FEEDING SUGGESTION IS GIVEN WITHIN A RANGE. IS THERE A SPECIFIC AMOUNT RECOMMENDED?

Naturally, Lambs and Kids will take numerous (up to 12) small daily feeds from the ewe/nanny. Ideally, Lambs and Kids should be given lots of low-volume feeds. Therefore, while there is a fundamental volume of feed that a lamb requires per day, it is desirable to spread that across as many feeds as possible.

### CAN PROFELAC SHEPHERD BE FED TO ANIMALS INTENDED FOR ANTIMICROBIAL PROGRAMS?

Yes. ProfeLAC Shepherd contains no ionophore or antimicrobial and is approved for use in most antimicrobial-free programs. Always check with your target market to be sure.

### CAN I FEED PROFELAC SHEPHERD TO CALVES?

ProfeLAC Shepherd is ideal for lambs and baby goats (kids). Whilst the nutrient content in ProfeLAC Shepherd is not harmful to calves, it has a denser nutrient profile than calves require. Therefore, a specific Calf Milk Replacer would be preferable.
